[jobs@jyn.dev](mailto:jobs@jyn.dev) |

[github.com/jyn514](https://github.com/jyn514) |

[jyn.dev](https://jyn.dev)

I excel at solving the socio-technical challenges inherent to having multiple stakeholders in large and complex projects, each of whom have their own concerns and priorities. I rely on empathy and strong technical communication to get projects back on track while ensuring all stakeholder's needs are met.

## Stabilized Open Source Features

Each of these were featured in an official Rust release blog post; click on the name for more info.

|                                             | Feature proposed                                                                                                                                                                                                                                                                                                                                                                                                              | Features often stall due to socio-technical conflicts, which I help resolve. | Stabilized                              |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|-----------------------------------------|
| <a href="#"><u>Intra-doc links</u></a>      | <a href="#">RFC</a> (2017)                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="#">stuck</a> (2018)                                                 | <a href="#">Jynn starts work</a> (2020) |
|                                             | Avoided re-implementing 6+ months of work by breaking down communication barriers between teams. <a href="#">Changed the long-term approach of the rustdoc team</a> to ensure future changes would not break the feature. Once stable, this feature made it much easier for library authors to write documentation, and therefore increased the amount of docs and made it easier to onboard engineers to the Rust ecosystem. |                                                                              |                                         |
| <a href="#"><u>Macros in attributes</u></a> | <a href="#">RFC</a> (2017)                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="#">stuck</a> (2018)                                                 | <a href="#">Jynn starts work</a> (2020) |
|                                             | Leveraged my experience and connections in the project to avoid duplicating two near-identical features. Convinced maintainers of the alternative feature that this solution met their needs, and got their active support. Once stable, this feature made it easier to maintain library documentation, making it easier to onboard engineers to Rust.                                                                        |                                                                              |                                         |
| <a href="#"><u>Labeled blocks</u></a>       | <a href="#">RFC</a> (2017)                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="#">stuck</a> (2018)                                                 | <a href="#">Jynn starts work</a> (2022) |
|                                             | Researched a highly controversial feature and convinced the language maintainers that it would be an improvement to the language. Refined the design in response to new information and concerns. Once stable, this feature made certain kinds of safety-critical code easier to write, increasing the reliability of code written in Rust.                                                                                   |                                                                              |                                         |

## Professional History

|                   |                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sep 2025–now      | <b>Compiler Team Lead</b> , <a href="#">Ferrous Systems</a> . Berlin, Germany (Remote).<br>Rewrote a code coverage pipeline to be precise, consistent, and reliable. Wrote a <code>rustc_driver</code> doing call-graph analysis for IEC-61508, ISO-26262 and IEC-62304 certification, saving engineers multiple hours of toil every week. Led a team of 5 on compiler and build system internals. |
| Nov 2024–Jun 2025 | <b>Software Engineer</b> , <a href="#">YottaDB</a> . Malvern, Pennsylvania (Remote).<br>Implemented dataflow compiler optimizations to make repeated database accesses faster. Added support for stack-frame-local variables to the runtime debugger. Improved efficiency and reliability of foreign-function-interface (FFI) calls between C and the database query language.                     |

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| May 2024–Aug 2024 | <b>Senior Software Engineer</b> , <a href="#">TCDI</a> . Greensboro, North Carolina (Remote).<br>Designed and implemented a system for database crash-consistency from scratch. Maintained <a href="#">pgrx</a> for creating PostgreSQL extensions in Rust and <a href="#">PL/Rust</a> . Researched and fixed a 10-year-old bug in the Rust standard library thread runtime. Sadly, the entire team was let go shortly after I joined, hence the short tenure. |
| Jan 2023–Apr 2024 | <b>Senior Rust Engineer</b> , <a href="#">Redjack</a> . Silver Spring, Maryland.<br>Refactored data processing to be massively parallel, decreasing runtime tenfold. Avoided spending two months building the wrong feature. Taught an hour-long weekly class to other engineers at the company.                                                                                                                                                               |
| Jun 2021–Dec 2022 | <b>Systems Engineer</b> , <a href="#">Cloudflare</a> . Austin, Texas.<br>Integrated a distributed WASM runtime with Chrome Devtools. Added HTTP/3 (QUIC) interception support for a Secure Web Gateway network proxy. Built internal tooling for diagnosing issues with distributed systems.                                                                                                                                                                   |

## Open Source Experience

### Rust Teams

|                   |                                                                                                                                                                                                                                                                     |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| May 2022–Jul 2023 | <b>Team Founder</b> , <a href="#">Bootstrap</a> .<br>Recruited 3 new members to the team. Fixed many “broken windows”, making it more likely that people reported bugs they found. Made it much easier for new contributors to build the rust compiler from source. |
| Dec 2019–Aug 2023 | <b>Team Lead</b> , <a href="#">Docs.rs</a> .<br>Recruited 4 new members to the team. Made it possible to run the web service locally without production credentials. Greatly reduced the frequency of incidents for the existing web service.                       |
| Jul 2020–Jan 2022 | <b>Team Lead</b> , <a href="#">Rustdoc</a> .<br>Recruited 5 new members to the team. Reduced the compile time for rustdoc itself by a factor of 9. Stabilized several features that had been in limbo for 3+ years.                                                 |

### Skills

|           |                                                                                                                                 |
|-----------|---------------------------------------------------------------------------------------------------------------------------------|
| Niches    | Mentoring, cross-team design, consensus-building, open source, documentation.                                                   |
| Domains   | Build systems, compilers, runtimes and critical systems, databases, inter-process communication, network proxies, web services. |
| Languages | Rust, C, Bash, Python, Regex, Typst, SQL, PowerShell, HTML, CSS/SCSS.                                                           |
| Services  | PostgreSQL, SQLite, Grafana, Kibana.                                                                                            |
